About Your Automatic-Dimming Mirror

Congratulations! Your new automobile is equipped with a Toyota Genuine Accessory Automatic-Dimming Mirror, manufactured by Gentex Corporation. During nighttime driving, this safety feature senses distracting glare from vehicle headlights behind you and automatically dims the mirror to eliminate glare and preserve your vision.

To Operate the Auto-Dimming Feature

1. If the green LED indicator is illuminated, the Auto-Dimming feature is on.
2. If it is not on, push the switch and release. Upon release, the LED should be illuminated and Auto-Dimming is enabled.

Shift Light Feature

The Shift Light feature provides low-level illumination for the vehicle shifter and center console area. This feature activates automatically at night and functions even when EC mirror is turned off.

Cleaning the Mirror

When cleaning the mirror, use a paper towel or soft cloth, dampened with glass cleaner. Do not spray glass cleaner directly on the mirror. The liquid may enter the mirror housing and cause damage to the mirror's internal components.

General Troubleshooting

1. Check to ensure power connector is fully plugged into back of mirror.
2. For all other problems, visit your local authorized Toyota Service Center.
